

How Sprout AI is farming for the future

Within one generation, those who grew up on the farm are now working in cities

Dec 09, 2021

Chris Bolton, founder and CEO of Sprout AI, discusses the importance of vertical agriculture and how Sprout AI's technology can help meet the increasing food demands sustainably.

Within one generation, those who grew up on the farm are now working in cities. Within those cities, they're having to import food from all corners of the world, often flown in. This has not only increased the price of those products, it has made it often difficult to recall them in case of contamination. Also, it unnecessarily generates greenhouse gas having to fly those products directly to them within the city. Sprout AI is designed to disrupt all of that. Sprout AI is based on technology that is repeatable, economic, practical, scalable, safe and secure.

We optimize use of power. We optimize the use of water, people, and most importantly, we optimize use of space that's limited within the cities to be able to cultivate those products.

In order for us to do that, it took time. We built the perfect technology to get fresh food, that is deemed to be organic, directly to your table without the use of pesticides or the risk of contaminants. That provides not just a longer shelf life within your fridge, the product is fresher, and of course, it is contaminant free.

Join the revolution. Join our disruption. Join Sprout AI.

ABOUT SPROUT AI:

Sprout AI (CSE: BYFM) is a technology company in the business of planning, designing, manufacturing and/or assembling vertical urban and controlled environment agriculture and farming cultivation equipment comprised of multi-level rolling racks that are populated with self-contained and environment-controlled habitats using its proprietary systems and technologies.
